

Online shopping

Online shopping system is designed for ordering, arranging and selling goods in the form of electronic commerce (e-Commerce) which allows consumers can buy goods or services from a seller over the Internet using a web browser. Web customer uses some web site to make purchases online. Customer can Search item, View Items, Make Purchase and make payment. The cashier prepares the bill for goods purchased by the customer. He then receives amount by credit or by cash from customer. The Manager checks for the availability of goods and buys stock and make supplier payment. While ordering goods, goods are received at inventory. Customer orders are shipped according to customer demand and availability of goods.
